

# TIMECLOCK TABLET APP

The APS Timeclock Tablet App is an easy-to-use digital time tracking tool that operates as a traditional wall-mounted punch clock. Simply run this native app on any Android, Apple, or Amazon internet-enabled tablet and link it to your existing APS account. Now your employees can easily and quickly clock in and out from one location with their employee ID and a 4-digit PIN.

## A Cost-Effective and Modern Time Capture Method

Accurate, electronic time tracking replaces manual, paper-based processes. The APS Timeclock Tablet App syncs your time tracking data with your payroll data in real time, making payroll processing faster and less costly. You'll wonder how you ever tracked employee time without it.

### Key Features

- Assign employees to clock in and out at all tablets or specific ones.
- Employees can clock in and out quickly for reduced bottlenecks that can occur at timeclocks.
- Track employee hours using clock rules, reinforce employee schedules, allow department swapping, and more.
- Real-time data syncs between the app, Manager Self Service, and APS OnLine for streamlined management and reporting of data.
- Track time for your most diverse work environments and employee wage structures.

### Key Benefits

- A traditional wall-mounted tablet eliminates the need for expensive hardware.
- A faster runtime creates a better user experience for increased adoption and decreased time spent fixing punches.
- Eliminate costs associated with payroll errors and manual data entry.
- Safe data storage and detailed time log to protect you from FLSA noncompliance and audits.
- Tablets are more cost-effective than computers or external clocking machines for a healthier bottom line.
